leukocyte common antigen long splice form precursor - human
Nalternate names: CD45; protein-tyrosine-phosphatase, receptor type c; T200 glycoprote
NyAlternate names: CD45; protein-tyrosine-phosphatase, receptor type c; T200 glycoprote
NyContains: leukocyte common antigen intermediate splice form; leukocyte common antige
C;Species: Homo sapiens (man)
C;Baccession: A46546; B46146; C46546; A29449; B29449; 157658

TISOIR SPECIFICITY: Particularly abundantly in adrenal glands.
SIMILARITY: Contains I FERM domain.
SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                  PINL RAT STANDARD; PRT; 1175 AA.

18SUE SPECIFICITY: DEtected in all tissues tested except for placenta and liver.
19 SIMILARITY: BELONGS TO THE RECEPTOR CLASS OF THE PROTEIN-TYROSINE PROTEINTS: PHOSPHRARS FAMILY.
19 FINITARITY: Contains 3 immunoglobulin-like C2-type domain.
19 SIMILARITY: Contains 8 fibronectin type III domains.
19 SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENTIAL OF 1503-1589 FROM N.A.

--- TISSUB SPECIFICITY: Expressed in a variety of human tissues including kidney, skeleral muscle, lung and placenta.
--- SIMILARITY: Contains 1 FERM domain.
---- SIMILARITY: Balongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

"cDNA cloning of a novel protein tyrosine phosphatase with homology
to cytoskeletal protein 4.1 and its expression in T-lineage cells.",
Blochem. Blochem. Blochys. Res. Commun. 203:479-484(1994).
-! FUNCTION: MAY BE INVOLVED IN THE REGULATION OF T CELL DEVELOPMENT.
-! - CATALITIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tyrosine + phosphate.
-!- TISSUE SPECIFICITY: Thymus; in cells of both hematopoietic and non-hematopoietic origins.
-!- SIMILARITY: Contains 1 FERM domain.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein tyrosine + phosphate.
-!- SUBCELIVIAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: Expressed in every tissue examined.
-!- SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.
-!- SIMILARITY: Contains 6 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1997 (Rel. 35, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tyrosine + phosphate.
--- SUBCELLIULAR LOGATION: Type I membrane protein (Probable).
--- SUBCELLIULAR LOGATION: Type I membrane protein (Probable).
--- TISSIE SPECIFICITY: Found in a variety of tissues. It is developmentally regulated in the brain (By similarity).
--- SIMILARITY: Conteains 1 exikaryocio-crype carbonic anhydrase domain.
--- SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
--- SIMILARITY: Contains 1 fibronectin type III domain.
                                                                                                                                                                                                                                                                                                                                                                                                                            Krueger N.X., Streuli M., Saito H.,
"Structural diversity and evolution of human receptor-like protein
tyrosine phosphatases.";
EMBO J. 9:3241-3252(1990).
Druck T., Huebner K.; which the house the gamma gene "Structure of the human receptor tyrosine phosphatase gamma gene (PTPRG) and relation to the familial RCC t(3;8) chromosome translocation.";

TYPOSINE + PhOSPHATE.

SUBCELLULAR LOCATION: Type I membrane protein.

BEVELOPMENTAL STAGE: Detectable in the epiblast of cocytes and BEVELOPMENTAL STAGE: Detectable in the epiblast of cocytes and throughout early mouse embryo development. In adult, expression is throughout early mouse embryo development. In adult, expression is localized in gonadal germ cells protein type in domains.

SIMILARITY: Contains 10 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lee K., Nichols J., Smith A.;
Mech. Dev. 61:213-215(1996).
-!- FUNCTION: May play a role in the maintenance of pluripotency.
Down-regulated during differentiation.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
                                                                                                                                                                                                                                                                                                 15-JUL-1998 (Rel. 36, Last sequence update)

phosphatase associated with bone and testicular differentiation.";
J. Biol. Chem. 269:30657(1994).
-!- FUNCTION: May function in signaling pathways during bone
remodeling, as well as serve a broader role in cell interactions
associated with differentiation in bone and testis. Optimal pH for
phosphatase activity is 5.6. Associated with differentiation in
bone and testis.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isold-Q64612-2; Sequence-Not described;
Note-No experimental confirmation available;
TISSUS SPECIFICITY: Bone and testis. In the latter, restricted to
the basal portion of the seminiferous tubule.
DEVELOPMENTAL STAGE: Up-regulated in differentiating cultures of
primary osteoblasts and down-regulated in late stage mineralizing
cultures. In testis, expression is highest between stages i and
VII when maturing spermatids remain buried within the sertoli
(Embryonic stem cell protein-tyrosine phosphatase) (ES cell bhosphatase) (Osteotesticular protein-tyrosine phosphatase) (OsT-PTP) PTRV OR ESP.
                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Comment=A presumed alternate transcript of 4.8-5.0 kilobases,
which may lack PTP domains, is present in proliferating
osteoblasts, but not detectable at other stages;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epithelium.
INDUCTION: By parathyroid hormone and CAMP analogs.
PTM: The cytoplasmic domain contains potential phosphorylation
                                                                                                                                                                                                                                                                                    TISSUB=Osteogarcoma;

-!- TISSUE SPECIFICITY: Expressed predominantly in anterior-like cells and to a lesser degree in prestalk cells.
-!- DEVELOPMENTAL STAGE: Expressed at a very low level in vegetative cells, induced by 4 hrs, maximally expressed at the tight aggregate stage and through the remainder of development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cell 71:637-647(1992).
-!- FUNCTION: May have a role in growth and in the early stages of development. Affects the timing of development.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
   -!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=93046662; PubMed=1423620;

-!- MISCELLANEOUS: The PTPAse domain is interrupted by a PTPAse insert which shares no homologies with other PTPAse proteins.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE-1848401; PubMed=11859160;

J. 305.499-504 (1995).
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.
-!- SUBCELLULAR LOCATION Type I membrane protein.
-!- SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                              PTPE MOUSE STANDARD; PRT; 699 AA.

-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
-!- SIMILARITY: Contains 1 rhodanese domain.

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein tyrosine + phosphate.
-!- tyrosine + phosphate.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.

TISSUB SPECIFICITY: Variants 4 and 3 are found in the lymph node.
variants 1 and 2 are found in thymocyte and lymph node.
PTM: Heavily N- and O-glycosylated.
PTM: The cytoplasmic domain contains potential phosphorylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   first one.
CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
MEDLINE=87275817; PubMed=2440674;
Barclay A.N., Jackson D.I., Willia A.C., Williams A.F.;
Barclay A.N., Jackson D.I., Willis A.C., Williams A.F.;
Lymphocyte specific heterogeneity in the rat leucocyte common antigen (T200) is due to differences in polypeptide sequences near the NH2-terminus.";
EMBO J. 6:1259-1264(1987).
-!- FUNCTION: Required for T-cell activation through the antigen receptor. The first PTPAse domain has enzymatic activity, while the second one seems to affect the substrate specificity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        InterPro; IPR003957; FN III-like.

Durbin R.;
Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Has a role in early neural and epidermal development;
neuroblast movements during closure of the gastrulation cleft and
epidermal morphogenesis. Vab-1 and ptp-3 may function redundantly
within the same sets of neuronal precursors.

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
tyrosine + phosphate.

-! SUBCELUGLAR LOCATION: Type I membrane protein; at adherens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "The C. elegans LAR-like receptor tyrosine phosphatase PTP-3 and the VAB-1 Eph receptor tyrosine kinase have partly redundant functions in morphogenesis.";
